Let's Talk Accounting with Professor Wim Van der Stede

Incentives are in wide use in many organizations, including non-profits such as healthcare where employees are rewarded for meeting healthcare service standards. That's the core idea behind incentives—to provide employees a performance-dependent reward (eg, extra pay for achieving certain results/targets). But do these incentives really drive the intended performance improvements (only), or do they (also) have various unintended consequences? May incentives even “crowd out” inherent motivations to perform well? Under what conditions can incentives be a ‘net positive’? When are they a ‘net negative’?
