

INTEGRATED MANAGEMENT DASHBOARDS

THE LONDON SCHOOL
OF ECONOMICS AND
POLITICAL SCIENCE

Dr Michela Tinelli
December 2023

A data-driven approach to inform service implementation

Homelessness provides the perfect test bed (complexity, coordinated working, real risk of harm and death of the population).

But the same approach can be transferable to all users/patients/client groups in social care and health.

If you are:

a service provider,
a commissioner in an ICB,
a local authority, an NHS trust, or
a representative from a national
charity, government depts, or
arm-length body, eg NHSE,

INTERESTED IN MOVING THE
NEEDLE IN SERVICE PROVISION
AND EVALUATION

Care Quality Evaluation

*Introducing Our
Revolutionary
Management Tool*

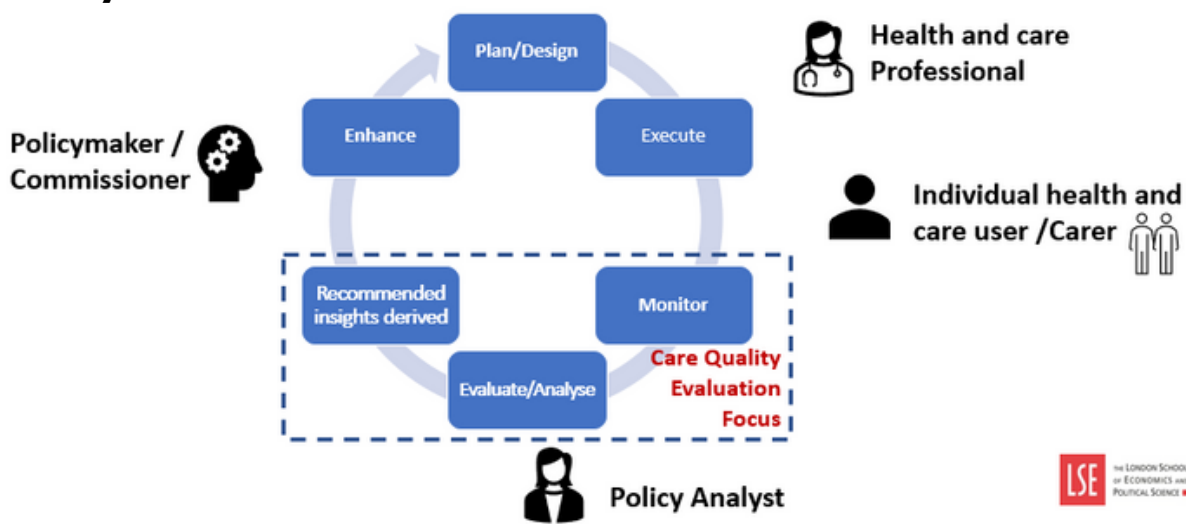

Gathering, analysing
presenting data to inform
planning, commissioning,
delivering and evaluating
effective and cost-
effective services.

Join the dots: improving people outcomes with data base decision making

Lifecycle of a health and care Initiative

The Care Quality Evaluation Platform

is designed to be a dynamic and responsive system that supports continuous data collection, monitoring, and evaluation to drive insights for enhancements and quality improvements.

What does this data approach mean for you now?

You receive:

- Continuous data collection, analysis, and reporting
- Numbers and case stories
- Essential metrics
- Consistent and standardised data collection
- Data comparability benchmark and trend analysis
- External evaluator
- Transferability of the approach

If you commit to:

- Providing data
- Using the dashboards
- Paying for maintenance fees

THE AIM AND OBJECTIVES OF THE DASHBOARDS:

The integrated management dashboards are designed to serve as a management tool for both local and national stakeholders.

Their primary objectives include:

Performance Monitoring	Quality Assessment	Resource Allocation	Trend Analysis
Risk Identification	Benchmarking	Reporting and Transparency	Continuous Improvement

HOW THEY WORK:

- Visual data presentation and interactive charts
- Filtering and customised data views
- Comparative Analysis
- Benchmarking and trend analysis

National Average	Regional or Location Averages	Type of Service Provision	Benchmarking with Similar Organisations
-------------------------	--------------------------------------	----------------------------------	--

WHAT THEY PROVIDE:

The dashboards provide actionable insights for programme stakeholders, including service providers, local and national commissioners, policymakers, and third-sector organisations.

By utilising the data, we inform decision-making, optimise resource allocation, and enhance effectiveness of out of hospital care for people who are homeless.

WHO CAN ACCESS THEM AND WHY:

Who: Local commissioners, service providers, and national stakeholders engaged with the OOHCM programme. ALSO: guest users can access samples of relevant visualisations.

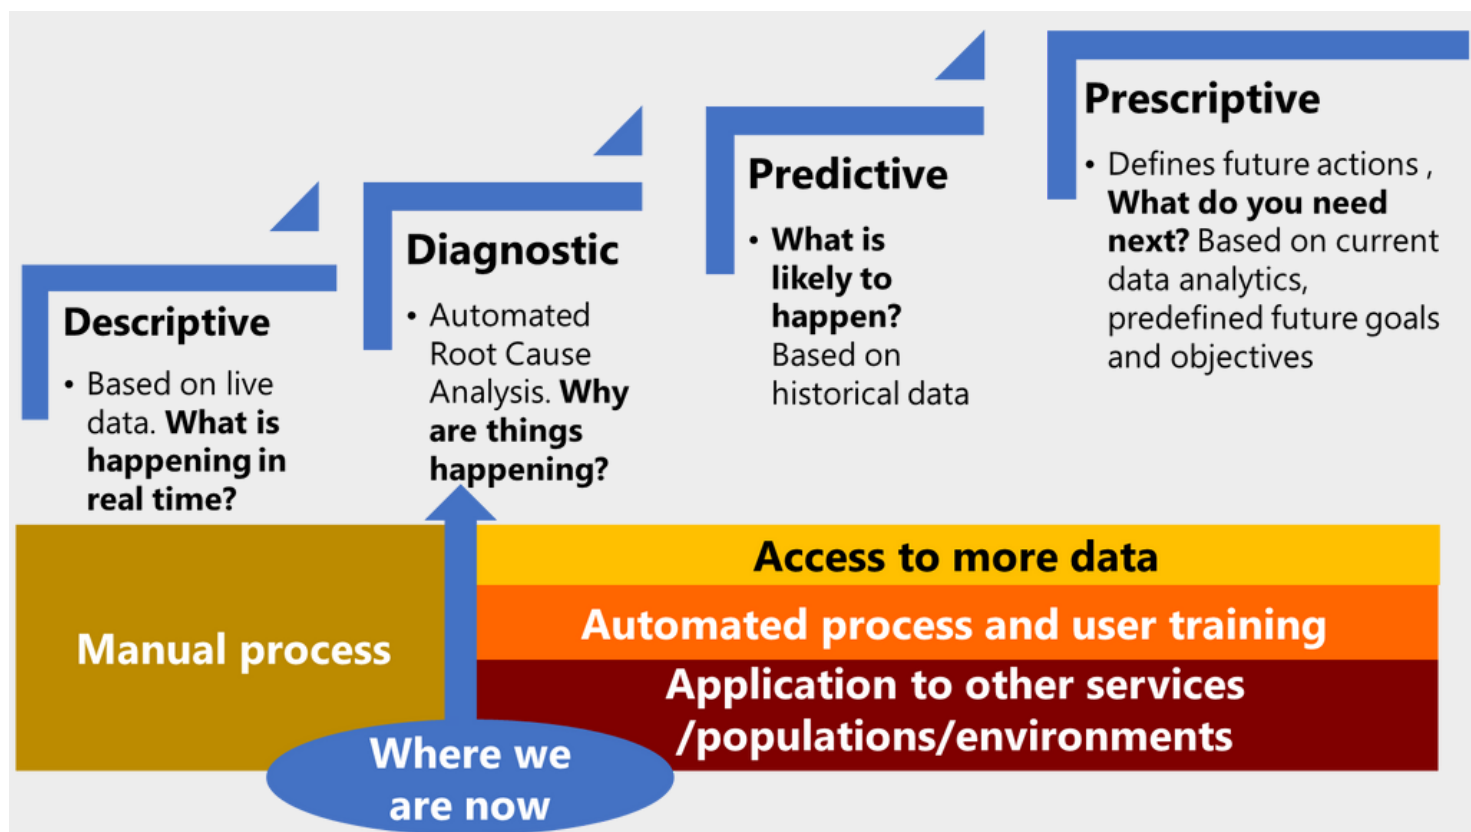

Why: This enables learning about the framework to consider its transferability to other services/populations / environments.

Roadmap

LSE is ready to support the development of the automated version, but this is contingent on stakeholders' commitment to:

- **Provide the data**
- **Use the dashboards**
- **Pay for running costs.**

This roadmap envisions a holistic evolution in managing homelessness, transitioning from a manual, descriptive/prescriptive approach to an automated, comprehensive system that embraces diagnostic, predictive, and advanced prescriptive functionalities.

Workshops are planned by the evaluation team to showcase the full potential of the dashboards and discuss the roadmap to adoption. If you are interested in participating
