to

Cole, Matt and Eric Neumayer (2005): Economic growth and the environment in developing countries: what are the implications of the Environmental Kuznets Curve?, in Peter Dauvergne (ed.): International Handbook of Environmental Politics, Cheltenham and Northampton: Edward Elgar Publishing, pp. 298-318

There is a mistake on the bottom of p. 299, which escaped our attention at the proofreading stage. It currently reads:

In equation (19.1), if $\delta > 1$ and $\varphi < 1$ then the estimated curve has a maximum turning point per capita income level, calculated as $Y^ = (-\delta/2\varphi)$.*

Instead this sentence should read:

In equation (19.1), if $\delta > 0$ and $\varphi < 0$ then the estimated curve has a maximum turning point per capita income level, calculated as $Y^ = (-\delta/2\varphi)$.*
