"Our customers are constantly updating us with fresh, accurate information. This is reducing our costs. Our customers trust us more, and are more open with their information."

"I don't have to keep inputting things again and again, I can choose who I share my data with and I feel more in control."

## Developers of apps ("Individuals' agents")

Need:

Contract  
Critical mass of users  
Sufficient data fields  
Language (API)  
Rules (VPI agreements)  
"Market in a Box"

## Attribute verifiers

Eg of name, address,  
age, creditworthiness  
"ID Providers"  
Byproduct of Mydata?

## Individual

Wants:

Convenience  
Trust + Utility

Requires:

PDS with dashboard  
VPI agreements

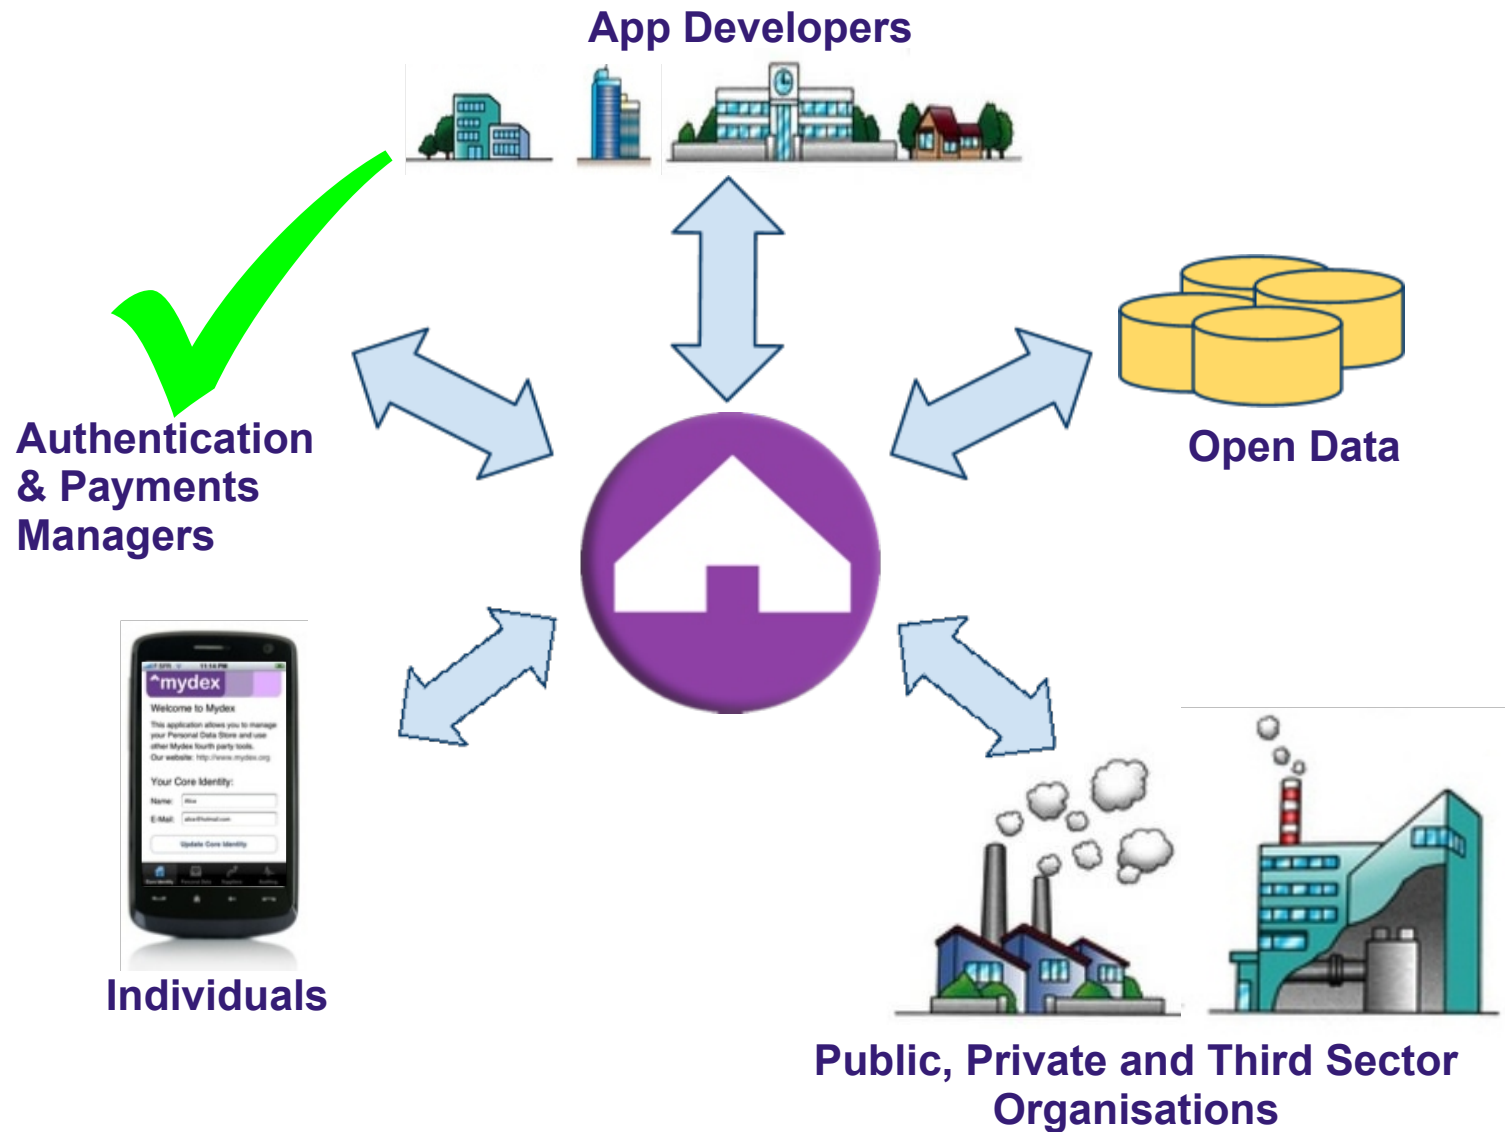

## Organisations

• Need:

Language (API)  
Rules (VPI agreement)

• Benefits:

Authentication  
Cleaner data  
VPI-based added-value services

## **Six steps to online social security**

1. Accept the individual as point of integration
2. Restore control over personal data to individuals
3. Let them acquire and demonstrate trust online
4. Support this with encryption and a payments mechanism
5. Support creation of apps to take user through the process
6. Do minor adjustment to public-sector systems so they can receive feeds of verified personal information (VPI)

This creates conditions for participative public services, more self-service, and low-cost ongoing transformation.

## Mydata enabled
