The internet raises more difficulties compared to the other references collected since there are more decisions about what to include - and exclude. The following selection of references often reflects my choices about which papers, chapters, books etc relate to my interest in ICTs in everyday life. Hence, they usually report empirical research, often relating the offline and online. More recently I have started to add more material that reflects online experiences such as those on social networking sites since I have started to do work in this area. The children and the internet references also reflect my involvement in the project EU Kids Online.
