CORRIGENDUM

to

There is a mistake on the bottom of p. 299, which escaped our attention at the proofreading stage. It currently reads:

In equation (19.1), if $\delta > 1$ and $\varphi < 1$ then the estimated curve has a maximum turning point per capita income level, calculated as $Y^* = (-\delta/2 \varphi)$.

Instead this sentence should read:

In equation (19.1), if $\delta > 0$ and $\varphi < 0$ then the estimated curve has a maximum turning point per capita income level, calculated as $Y^* = (-\delta/2 \varphi)$.
