

We can help to

Conserve reindeer herds

- How are reindeer herds affected by weather patterns?
- How much population control is necessary?
- What could be the impact of climate change on the herd?

We have worked with national park managers and ecosystem modellers to understand how limited data can help draw conclusions about the effect of weather and population control on the herd, helping to make recommendations for conservation.

ECOPOTENTIAL is an EU Horizon-2020 project, 641762
