

In going from Perfect to Imperfect Model:

60% prob(X) unchanged 20% prob(X) increased 20% prob(X) decreased.

Where prob(X) := bet on the verification.

Considering all the bets:

For each individual pin: ~60 % of you changed a bet , 40% kept the same

But counting all pins: ~30% people held all bets constant!

Circling the Right Target:

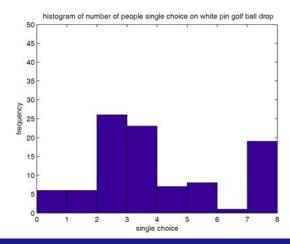

You did systematically better on the Red Reality ball than on the Golf ball.

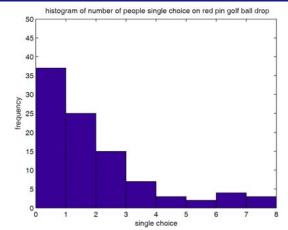

Number Correct	Golf-ball	Red-Ball
0	76	43
1	17	38
2	2	10
3	1	5

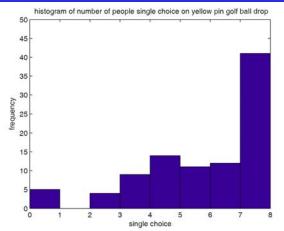

So the betting strategy mattered!

### Initial Condition

White

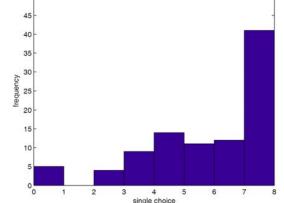

These were the bins you circled for the golf ball

100

100

## Details:

Those who bet less than 100 were allowed to keep the remainder as winnings!

Those who bet more than 100 were renormalized.

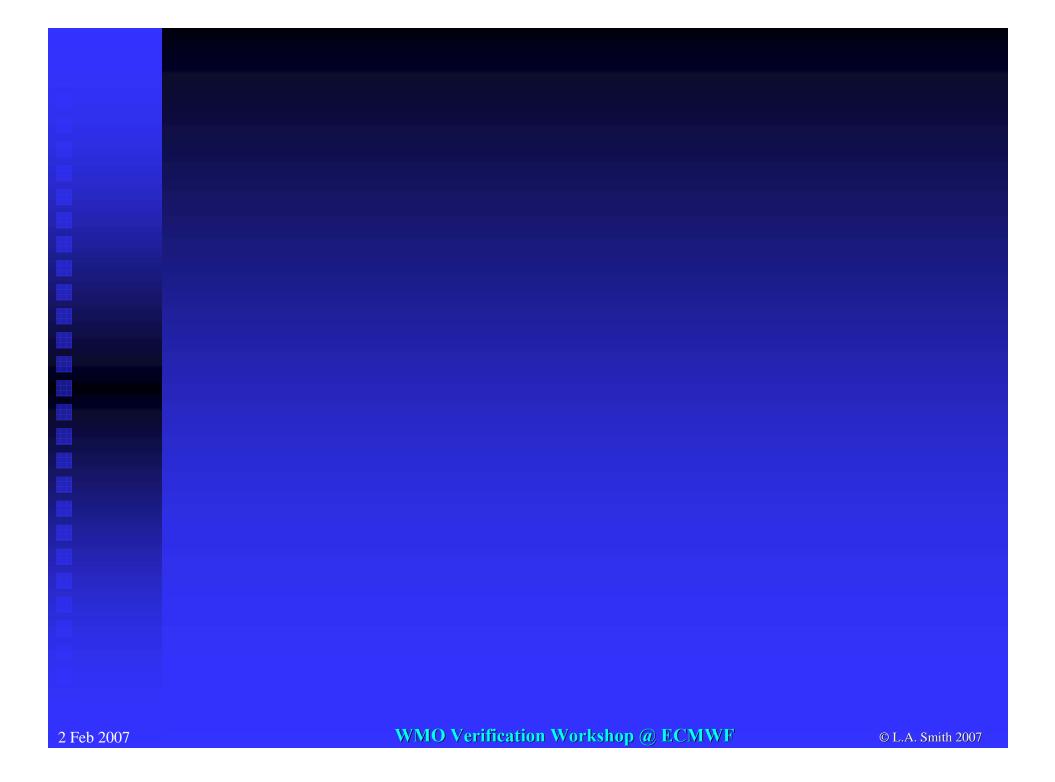

# Results:

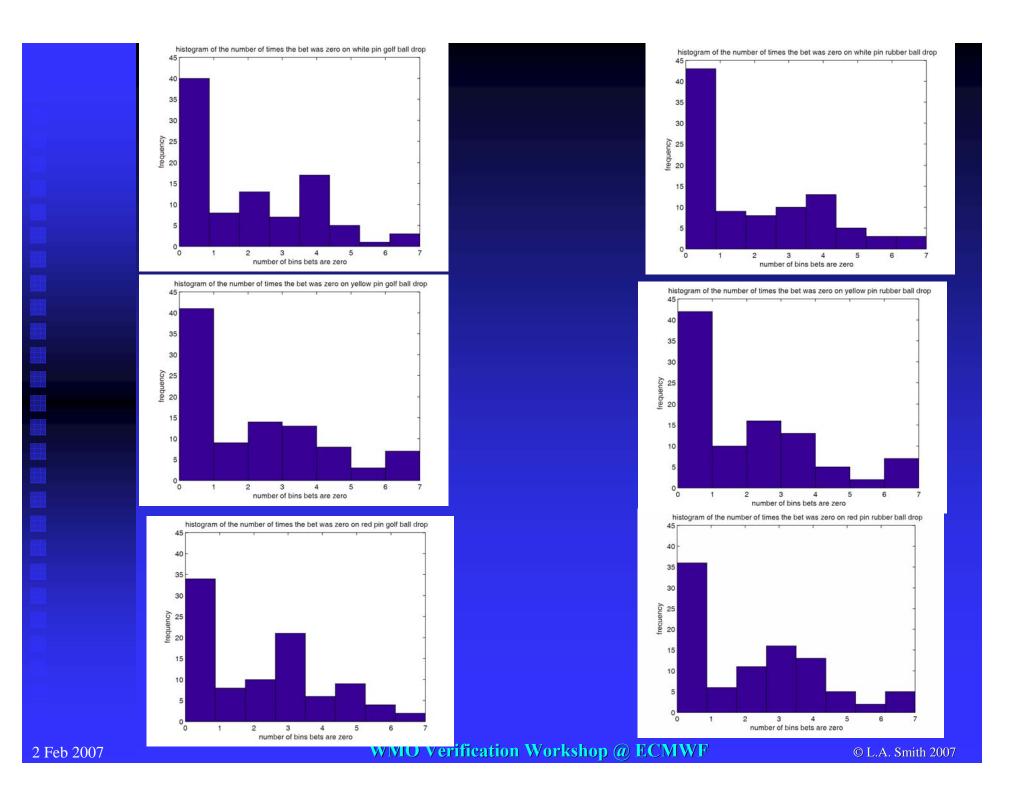

Honourable Mention (over all or in each event):

Ferro, "ND2", SJM, Louro Kalin, Mirta Pataroic and C. Santos

And the winner is:

## CBELL
