

# VISIONS FOR PLANETARY HEALTH

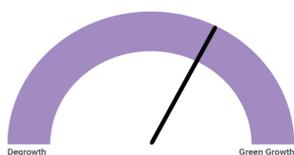

**TAKE PART IN  
OUR SURVEY!**

**SEE HERE FOR THE RESULTS  
EVERY DAY OF THE FESTIVAL**

## LSE FESTIVAL SURVEY RESULTS, JUNE 2023

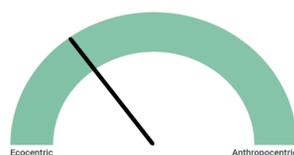

### QUESTION 1

In your opinion, planetary health is most likely to be achieved through ...

### QUESTION 2

In your opinion, the worldview best aligned with planetary health is ...

### QUESTION 3

In your opinion, planetary health is most likely to be achieved through ...

Restoring our planet's health requires us to question our current ways of living so that humanity can flourish within the planetary boundaries that set sustainable limits on the impact of human activities on earth. People have different views of what planetary health looks like and how we can achieve it. Where do you stand?

These gauges show the average results from a representative sample of 396 people in the UK gathered in May 2023.

### DEGROWTH

Degrowth requires us to equitably scale down production and consumption in high-income countries to benefit human wellbeing and the environment.

### Key ideas for planetary health

These six concepts are shaping different visions of planetary health today. Take our survey to let us know your views on these key ideas.

### ECOCENTRIC

Ecocentric worldviews see all of nature as having inherent value, and are centred on nature rather than on humans.

### TOP-DOWN ACTION

Top-down action on planetary health involves government-led policy initiatives and international cooperation.

### GREEN GROWTH

Green growth supports economic growth and development while ensuring natural resources still provide for human wellbeing.

### ANTHROPOCENTRIC

Anthropocentric worldviews see humans as the source of all value, and nature as valuable merely as a means to human ends.

### BOTTOM-UP ACTION

Bottom-up action on planetary health emerges from changes by individuals and local communities.
