

# **Course information 2025-26 MT105a Mathematics 1**

#### **General information**

**MODULE LEVEL: 4** 

**CREDIT: 15** 

**NOTIONAL STUDY TIME: 150 hours** 

MODE: Locally Taught, Independent Learner Route and Online Taught

## **Summary**

This half course develops basic mathematical methods and will emphasise their applications to problems in economics, management and related areas.

#### **Conditions**

Please refer to the relevant programme structure in the EMFSS Programme Regulations to check:

- where this course can be placed on your degree structure; and
- details of prerequisites and corequisites for this course.

You should also refer to the Exclusions list in the EMFSS Programme Regulations to check if any exclusions apply for this course.

## Aims and objectives

The objectives specifically include:

- To enable students to acquire skills in the methods of calculus (including multivariate calculus) and linear algebra, as required for their use in economics-based subjects.
- To prepare students for further units in mathematics and/or related disciplines.

## **Learning outcomes**

At the end of the course and having completed the essential reading and activities students should be able to:

- used the concepts, terminology, methods and conventions covered in the half course to solve mathematical problems in this subject.
- the ability to solve unseen mathematical problems involving understanding of these concepts and application of these methods
- seen how mathematical techniques can be used to solve problems in economics and related subjects

# **Employability skills**

Below are the three most relevant employability skills that students acquire by undertaking this course which can be conveyed to future prospective employers:

- 1. Complex problem solving
- 2. Decision making
- 3. Adaptability and resilience

# **Essential reading**

For full details, please refer to the reading list.

Anthony, M. and N. Biggs Mathematics for Economics and Finance. (Cambridge: Cambridge University Press, 2024) [ISBN 978-1108459433].

## **Assessment**

This course is assessed by a two-hour and fifteen-minute closed-book written examination.

## **Syllabus**

This half course develops basic mathematical methods and will emphasise their applications to problems in economics, management and related areas.

**Basics**: Basic algebra; Sets, functions and graphs; Factorisation (including cubics); Inverse and composite functions; Exponential and logarithm functions; Trigonometrical functions.

**Differentiation:** The meaning of the derivative; Standard derivatives; Product rule, quotient rule and chain rule; Optimisation; Curve sketching; Economic applications of the derivative: marginals and profit maximisation.

**Integration:** Indefinite integrals; Definite integrals; Standard integrals; Substitution method; Integration by parts; Partial fractions; Economic applications of integration: determination of total cost from marginal cost, and cumulative changes.

**Functions of several variables:** Partial differentiation; Implicit partial differentiation; Critical points and their natures; Optimisation; Economic applications of optimisation; Constrained optimisation and the Lagrange multiplier method; The meaning of the Lagrange multiplier; Economic applications of constrained optimisation.

Matrices and linear equations: Vectors and matrices, and their algebra; Systems of linear equations and their expression in matrix form; Solving systems of linear equations using row operations (in the case where there is a unique solution); Some economic/managerial applications of linear equations.

**Sequences and series:** Arithmetic and Geometric Progressions; Some Financial application of sequences and series.
