WELCOME TO LSE ECONOMICS OPEN DAYS

Choosing the right degree programme for you

Dr Junius Olivier

Undergraduate Tutor

What is a Joint Degree?

- A joint degree **combines courses** from two different Departments into one degree (the exception is PPE that combines three)
- Structured to **complement each other** and form a coherent sequence
- A joint degree combines the subjects 50/50: e.g. BSc Economics and....
- Economics can also be studied as a minority subject in proportions 75/25: e.g. BSc.....with Economics
- Economics is paired either with Mathematics or with a more essay-based discipline.

Joint Degrees

BSc Politics and Economics

BSc Economics and Economic History

BSc Philosophy and Economics

BSc Mathematics and Economics

BSc International Social and Public
Policy and Economics

BSc Philosophy, Politics and Economics
(4 year programme)

'With Economics' degrees

BSc Geography with Economics

BSc Mathematics with Economics

BSc Environmental Policy with
Economics

- We recognize that joint degree students have **different academic needs** to our BSc Economics students
- Our courses are **tailored** to those needs.
- Students on joint degrees now take Microeconomics, Macroeconomics and Econometrics in Year 2, giving a solid foundation for Year 3
- Our new structure provides a **quantitative and a non-quantitative track**, with scope to switch between them.

Is such a programme for me?

- You should be interested in the other subject (at least) as much as in Economics
- You must **genuinely enjoy Mathematics** for the sake of it,
or
- have a **genuine interest in essay writing and extensive reading**
- Leaves open the possibility of a Masters Degree in either field
- Most useful if you are interested in an interdisciplinary career

- If you are interested in economics but do not see yourself becoming an economist, also consider:
 - BSc Management
 - BSc Finance
