

Consulting: Energy & Economics

Join us at the LSE SU's Energy and Economics Societies' *first ever* collaboration as we explore the career paths of economists and consultants at renowned economic consultancies based right here in London. Notably, our panelists have expertise within the energy sector, climate change, corporate finance; and have consulted for the World Bank, governments worldwide and multinational private sector firms.

Tuesday, February 9th, 6.15pm - 8pm
LSE Campus, TW1.G.01

Stefania Lovo, Research Officer, Grantham Research Institute, LSE

Stefania's research focuses on environmental issues in developing countries. She worked previously at the Legatum Institute and as external consultant for the World Bank and the Italian Development Cooperation in the West Bank. She holds a PhD in Economics from the University of Sussex and a PhD in Economics and Finance from the University of Verona. She will be hosting this event.

Jostein Kristensen, Partner, Oxera

Jostein focuses on market analysis and regulation in the energy and related infrastructure sectors. He advises companies, governments, investors and regulatory authorities on antitrust and regulatory investigations, commercial disputes, and transactions. Within the energy sector, his work has covered coal, electricity (including renewable and nuclear generation), natural gas and oil.

Andrew Tipping, Senior Economist & Consultant, ECA

Andrew Tipping is a senior economist and consultant at Economic Consulting Associates, with experience in business and market development, financial and economic analysis, transaction advice, corporate finance and governance. Andrew joined ECA in 2011 from a background in investment banking, consulting and business development, and has been involved in market analysis, regulatory design, project assessments and impact analyses.

Paget Fulcher, Managing Consultant, CEPA

Paget specialises in economic regulation and public policy analysis. His work focuses on industries characterised by government intervention or oversight, and spans CEPA's Energy and International Infrastructure Sectors. His work has spanned most elements of the energy industry from the modelling of feed-in tariffs for small-scale renewable electricity generation to forecasting the security of electricity and gas supplies.

Aditi Sahni, Economist, Vivid Economics

Aditi brings expertise in economic modelling of industrial markets and analysis of natural resource management policy. She has a breadth of experience across practice areas, including advising countries on climate strategies and energy transitions, modelling interactions between rival firms and consumers within capital-intensive industries, and helping clients understand the relationship between economic growth and carbon resilience.
